Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Seebeck fails to disclose the fruit juice including a cereal sugar. However, as noted in the previous Office Action, there is insufficient support for the limitation of "cereal sugar." Additionally, Seebeck broadly discloses the use of fruit juices and Hirao teaches that fruit juices containing maltose were well known. Therefore, it would have been obvious to use a fruit juice containing maltose, as taught by Hirao, in the invention of Seebeck since the only limitation on the juice of Seebeck is that it must contain sufficient fermentable sugar. In further support of this combination, Snelling teaches that maltose, dextrose and other suitable carbohydrates made be added to fruit juice to aid in fermentation. Applicant also argues that Shimamura fails to dislose aerating the "yeast-containing output." However, this limitation is taught by Seebeck. As such, the claims remain rejected for the reasons of record.
